## (54) Title: IMPROVEMENTS IN CONVENIENCE ROLLS

**WO 2004/093627 A1**

(57) Abstract: A convenience roll in the form of an elongate web (10) of material comprises a multiplicity of individual portions (11) integrally connected together in series. Each individual portion (11) is shaped so as to have an area that is less than the product of its overall width across the web multiplied by its length along the web. Neighbouring individual portions are connected together by a frangible zone (12) of material whose width across the web is small relative to the overall width of the web so as to act as a controlled breaking point for when an individual portion is to be separated from its neighbour on dispensing.
